A Project Report
on
“Online Boutique and Rental Clothing Store”

Under the Subject
On Job Training (OJT)
By
PRATIKSHA KRISHNA YAMGAR (11525)

TY BBA(CA)
(Academic Year 2025-2026)

Submitted To

Savitribai Phule Pune University

In the partial fulfillment of
Bachelor of Business Administration (Computer Application)

Under the Guidance of
Prof. SHRIDEVI A. PAWAR

CERTIFICATE

This is to confirm that Ms. PRATIKSHA KRISHNA YAMGAR of Class TY BBA(CA) NEP 2023 Division A having Member ID 11525 have been successfully completed the **On Job Training (OJT)** with **Course Code: 23BaBbcOJTU6004** prescribed for Semester VI of the academic year 2025-2026.

Prof. Shridevi A. Pawar
(OJT Project Guide)

Prof. Mina Gawande
(OJT SPOC)

Prof. Manasi Vale
(UG –Coordinator)

Prof. Dr. Pradnya Khalane
HOD-BBA(CA)

Prof. Lawly Das
**Assistant Coordinator
BA Campus**

Prof. Dr. Anjali Sardesai
Coordinator BA Campus

Internal Examiner

External Examiner

DECLARATION

I am PRATIKSHA KRISHNA YAMGAR student of TYBBA(CA) NEP 2023 hereby declare that this OJT report conducted for the subject **On Job Training (23BaBbcOJTU6004)** is our original work. The information and data given in this report is authentic to the best of our knowledge.

Student's Name and Signature: PRATIKSHA KRISHNA YAMGAR

Class & Division: TY BBA(CA) 'A'

Member ID: 11525

Place: PUNE

Date: 17 March 2026

ACKNOWLEDGEMENT

I would like to sincerely thank everyone who contributed directly or indirectly to the successful completion of our OJT project.

I am deeply grateful to our OJT Project Guide, Prof. Shridevi A. Pawar, for her continuous guidance, valuable suggestions, and kind support throughout the project work.

I extend our heartfelt thanks to Prof. (Dr.) Anjali Sardesai Madam, Co-Ordinator of BA Campus, for her constant motivation and encouragement, which greatly helped us in completing this project successfully.

I express our sincere appreciation to Prof. Lawly Das Madam, H.O.D. of the BBA Department and Assistant Co-Ordinator of BA Campus, for her inspiring leadership and continuous support during the course of our project.

I would like to express our gratitude to the Prof. Dr. Pradnya Khalane madam, H.O.D of the BBA-CA Department for her constant guidance throughout the completion of our project.

I would also like to thank Ms. Neeraja Bhide, Trainer from TNS India Foundation, for her valuable guidance and assistance.

I am equally thankful to all the BBA(CA) faculty members for their constant support and encouragement.

Student's Name and Signature: PRATIKSHA KRISHNA YAMGAR

Class & Division: TY BBA(CA) 'A'

Member ID: 11525

Place: PUNE

Date: 17 March 2026

INTRODUCTION

Synopsis

Existing System

In the traditional boutique system, most clothing stores operate through physical shops where customers must visit the store to check available clothing items. Customers browse through different outfits, try them on, and then decide whether to buy or rent them. Information about products, orders, and rentals is usually maintained manually in registers or simple spreadsheets.

For rental clothing, store owners keep records of which outfit is rented, the rental period, and the return date manually. This method makes it difficult to track inventory and rental availability accurately. Customers also need to call or visit the store to check whether a particular dress or outfit is available.

Because of the lack of a centralized digital system, managing customer details, product inventory, rental records, and payments becomes time-consuming and inefficient.

Limitations of Existing System

1. Manual Recording Keeping

Most boutique stores maintain records manually, which increases the chances of human errors and data loss.

2. Time-Consuming Process

Customers must physically visit the boutique to view products or rent clothes, which can be inconvenient.

3. Limited Product Visibility

Customers cannot easily view all available clothing collections from home.

4. Difficulty in Rental Management

Tracking rented clothes and return dates manually can lead to confusion or lost records.

5. Poor Inventory Management

Without a digital system, it becomes difficult to manage stock availability and updates.

6. Lack of Online Ordering System

Customers cannot place orders or rent outfits online.

7. Limited Communication with Customers

Store owners cannot easily notify customers about new collections or offers.

Proposed System

The proposed system is a web-based Online Boutique and Rental Clothing Store designed to manage the selling and renting of clothing items through a centralized online platform. The system allows customers to browse clothing collections, rent outfits for special occasions, and purchase products easily from anywhere.

- **Admin Module:**The admin can manage important data such as clothing products, product images, customers, orders, rental details, and payments. The admin can add new products, update product information, delete items, and monitor rental and purchase activities.
- **Customer Module:**Customers can register and log in to the system to browse available clothing items, view product images and descriptions, check prices, and either purchase or rent outfits according to their needs.
- **Order and Rental Management:**The system allows customers to place orders for clothing items or rent outfits for a specific period. The admin can track orders, manage rental return dates, and update order status.
- **Payment Management:**Customers can make payments for purchases or rentals through the system, and the admin can monitor payment details and transaction records.
- **Report Module:**The system also provides reports that allow the administrator to view summaries of products, customers, orders, rentals, and payments in one place. By implementing this system, the boutique owner can manage inventory efficiently, reduce manual work, and provide customers with a convenient online shopping and rental experience.

ANALYSIS

Fact Finding Technique

For the development of the **Online Boutique and Rental Clothing Store**, different techniques were used to understand the current processes and problems faced in managing clothing sales and rental services.

1. Observation

The existing system was studied by observing how boutique stores manage clothing products, customer orders, and rental services. It was observed that many boutiques maintain records of products, rentals, and payments manually or using basic computer applications.

2. Interviews

Discussions were conducted with boutique owners and customers to understand their requirements and the difficulties they face in managing clothing inventory, rental records, and customer orders.

3. Document Analysis

Various documents such as product lists, rental registers, order receipts, and payment records were analyzed to understand the type of data stored and how it is maintained.

4. Online Research

Information about existing online boutique websites and clothing rental platforms was collected through online resources to understand common features and system requirements.

Feasibility Study

A feasibility study is conducted to determine whether the proposed Online Boutique and Rental Clothing Store system is practical, beneficial, and achievable within the available resources. It helps evaluate whether the system can be successfully implemented for managing online clothing sales and rentals.

1. Technical Feasibility

The proposed system will be developed as a web-based application using modern web technologies such as HTML, CSS, JavaScript, PHP, and MySQL. These technologies are widely used for web development and are easy to implement. The required hardware and software resources such as computers, internet connectivity, and web browsers are easily available. Therefore, the system is technically feasible.

2. Economic Feasibility

Economic feasibility analyzes the cost and benefits of implementing the system. The proposed system can be developed using open-source technologies, which reduces development and maintenance costs. By automating boutique operations

such as product management, order processing, and rental tracking, the system saves time and reduces paperwork. Therefore, the system is economically feasible.

3. Operational Feasibility

Operational feasibility determines whether the system will be accepted and used by the users. The proposed system provides a user-friendly interface for both administrators and customers. Customers can easily browse clothing items, place orders, or rent outfits, while administrators can manage products and track orders efficiently. Therefore, the system is operationally feasible.

S/W Requirement (Front End & Back End)

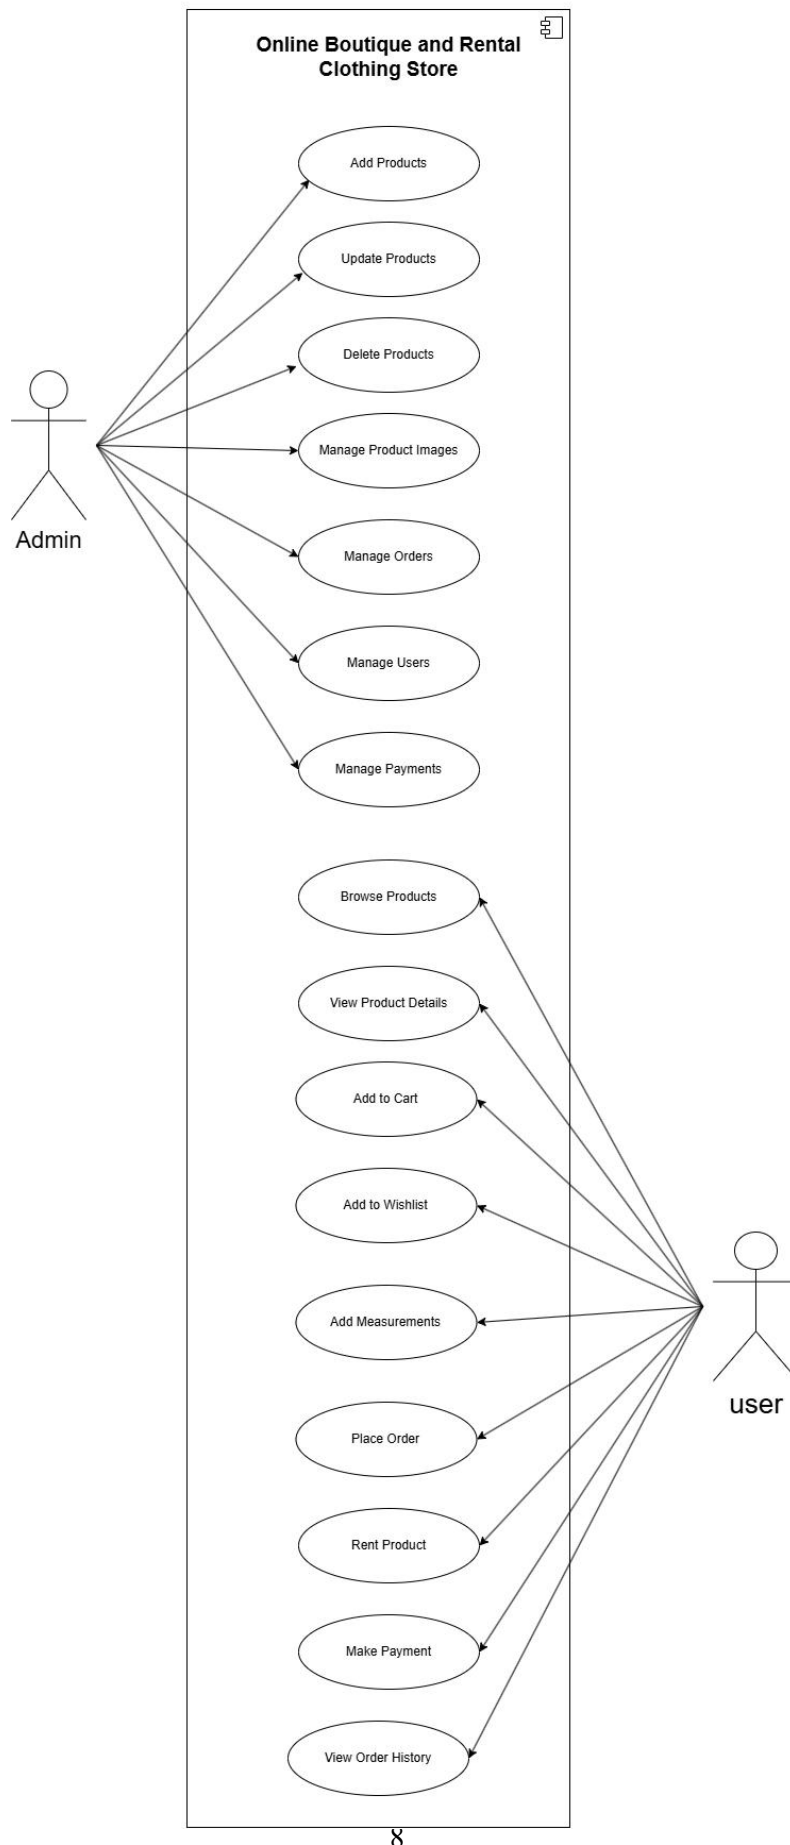

- Front End: HTML, CSS, JavaScript
- Back End: PHP
- Database: MySQL
- Server: XAMPP

H/W Requirement (Processor, Operating System, RAM, Hard Disk)

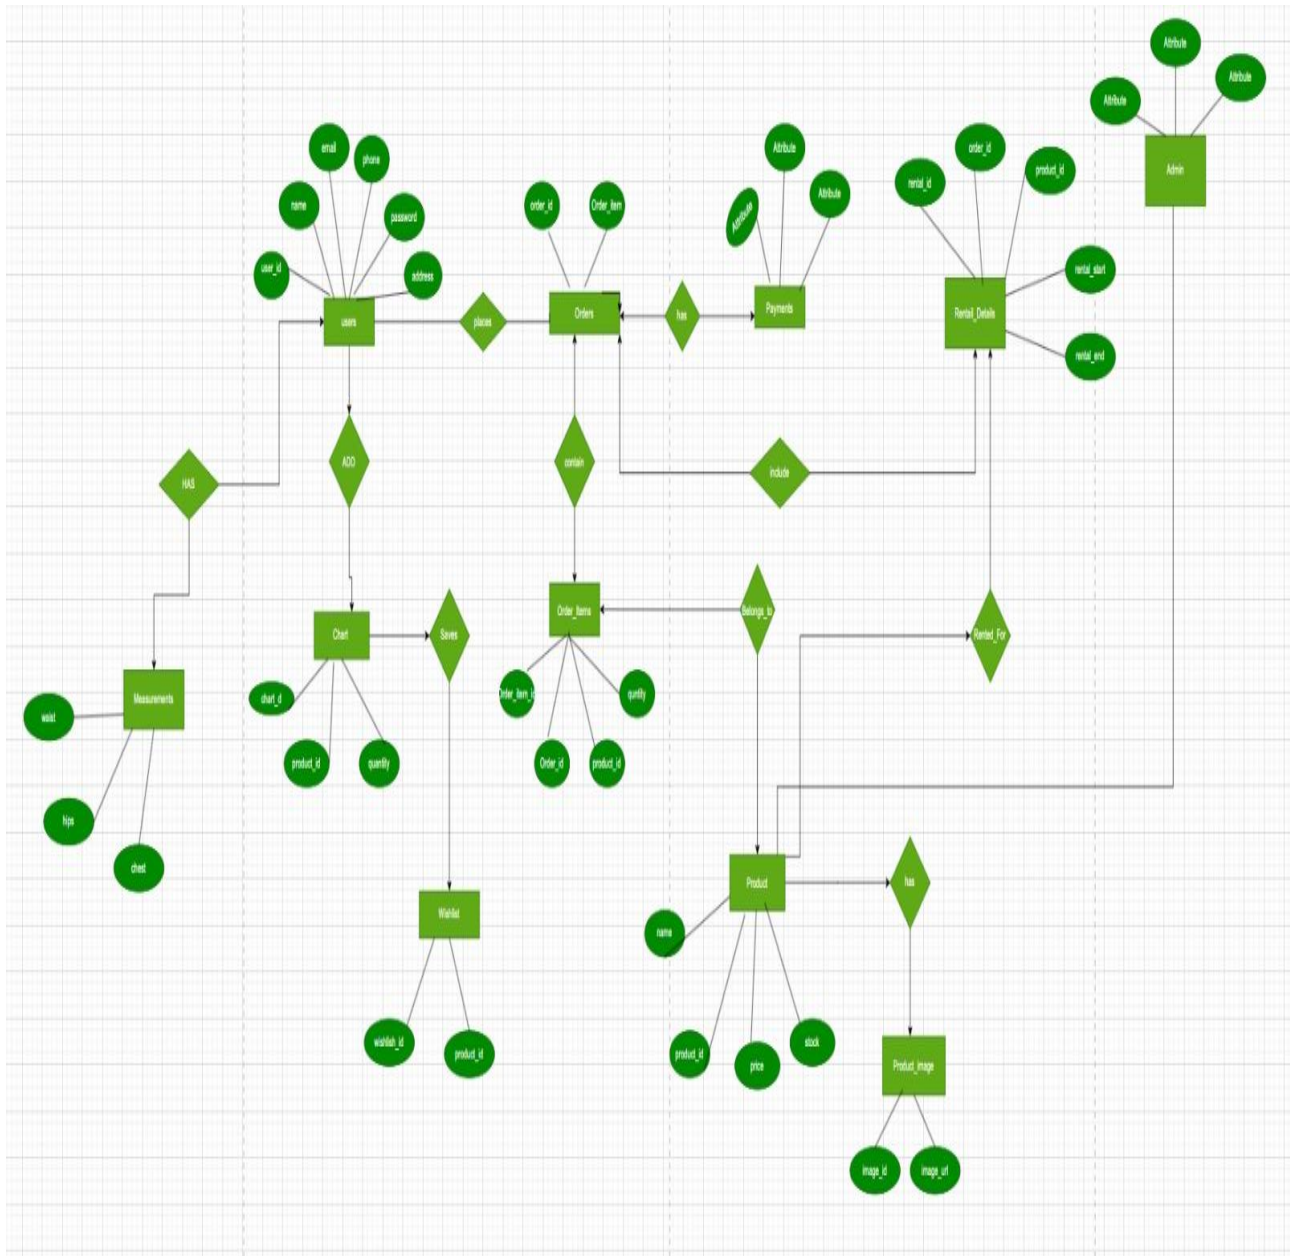

- Processor: Intel Core i5
- Operating System: Windows
- RAM: 8 GB
- Hard Disk: 500 GB or above

DATA REPORTS

The Online Boutique and Rental Clothing Store provides reporting functionality that helps the administrator monitor and analyze important business information. The system generates different types of reports to track products, orders, rentals, and payments.

1. System Report (Admin)

The system report provides an overall summary of important records in the system. It includes:

- Total number of registered customers
- Total number of products available
- Total number of orders placed
- Total number of rented clothing items
- Total payments received

2. Product Report

This report displays information about clothing products available in the boutique.

- List of all clothing items
- Product category and price
- Rental price and availability status

3. Order Report

This report provides details of customer orders.

- Total number of orders placed
- Order status (completed, pending, or cancelled)
- Customer order history

2. Rental Report

This report displays information about rented clothing items.

- List of rented products
- Rental start date and return date
- Rental status (active or returned)

3. Payment Report

This report provides payment information.

- Total payments received
- Pending payments
- Transaction details of customers

ADVANTAGES & LIMITATIONS OF **CURRENT SYSTEM**

Advantages:

1. User Role Management

- Multi-role architecture (Admin and Customer)
- Secure login authentication for users
- Role-based access to different sections of the system

2. Product and Rental Management

- Admin can add, update, and delete clothing products
- Customers can browse products and view detailed information
- Rental feature for clothing items with rental duration

3. Database Integration

- Relational database design with proper table relationships
- Data integrity maintained across related tables such as products, orders, and payments
- Efficient database queries for faster data retrieval

4. User Interface

- Responsive design using Bootstrap
- Attractive and user-friendly interface
- Consistent layout across all pages
- Professional appearance with modern UI components

5. Functional Features

- Real-time updates for product listings and orders
- Order placement and rental booking functionality
- Image upload for clothing products
- Product search and filtering options

6. Security Features

- SQL injection prevention using prepared statements
- Input validation to protect system data
- Secure login and password management

Limitations:

Internet Dependency

- The system requires a stable internet connection to access the website and perform operations.
- Users cannot access the system offline.

2. Limited Payment Options

- The system may support only limited payment methods.
- Customers may face inconvenience if their preferred payment

- option is not available.

3. Security Risks

- The web-based system may face unauthorized access.
- Customer data must be protected properly.

4. System Maintenance

- Requires regular updates and maintenance.
- Issues may occur if the system is not maintained properly.

5. Limited Product Availability

- Customers can only access available products.
- Out-of-stock items cannot be rented or purchased.

6. Technical Errors

- Server or software problems may occur.
- System performance may slow during heavy usage

FUTURE ENHANCEMENT

The system can be improved in the future by adding additional advanced features.

1. Mobile Application

- Develop a mobile app for easier access to the boutique system.

2. Online Payment Integration

- Add more secure online payment options for customers.

3. Advanced Search and Filters

- Provide better search and filtering options for clothing items.

4. Customer Review System

- Allow customers to give ratings and reviews for products.

5. Notification System

- Send notifications to customers for order updates and rental return reminders.

6. AI-Based Recommendations

- Suggest clothing items to customers based on their preferences and previous orders.
